Research focus of the lab

The primary goal of our lab is to understand major biological processes at the molecular level with the ultimate aim of alleviating human diseases and to explore the diagnostic/prognostic markers along with novel therapeutic targets/ agents. Our research focus on the Targeting Apoptosis pathways in cancer therapy and analysis of platelet function during different pathophysiological conditions.

Published more than 21 research articles in various peer reviewed international and national journals and organized more than 5 national and state level CMEs and workshops.
